

RADIANT FLOOR INSULATION OPTIONS

Proper insulation on radiant floor system is critical to prevent heat loss from the concrete floor slab to the foundation wall, the footing or the above ground wall.

INSULATION OPTIONS Slab on Grade or Below Grade

SLAB EDGE INSULATION IS VERY IMPORTANT

When the concrete slab is finished with a floor covering, the R factor of the insulation below the slab should never be less than three times the R factor of the total floor material, including floor covering, above the slab.

IMPORTANT

These drawings are conceptual and may not represent actual construction features. Actual construction must be completed according to appropriate building codes and accepted construction practices.
